

What is claimed is:

1. A mold for producing a multilayer molded article comprising a resin body and a skin material which covers a part of the surface of the resin body and an edge part of which present on the surface of the resin mold is placed in a groove formed on the surface of the resin body, which mold comprises a lower mold having at least one pin for fixing the edge part of the skin material at a position where the edge part of the skin material is placed and an upper mold having a kick for forming the groove on the surface of the resin body.

2. The mold according to claim 1, wherein the fixing pin is retained on a protrusion on the lower mold.

3. The mold according to claim 2, wherein the protrusions are movable in a direction in which the upper and lower molds are closed.

4. The mold according to claim 2, wherein the pins are formed in a groove which is formed in the lower mold.
